

### Q5. What's *Torikkiri Saibai*® ?

"*Torikkiri saibai*®" is a new cultivation method jointly developed by Meiji University and Pioneer Eco science Co. Ltd.

#### <Features>

- Thick asparagus can be cultivated in about a year.
- Regular employment is carried out in February-March, all stems are harvested in March-June of the following year, and single-year cultivation is carried out without carrying over the plants to the next year.
- Once the plants are harvested, the soil is cultivated together with the plants to end the season, reducing the cost and effort required to deal with diseases and pests.
